

RODABELL[®] Boron Nitride Coating (RBNC85) is the best solution to maintain liquid aluminum refractory systems thanks to its non-wetting and anti-adherent properties against non-ferrous metals. When applied, it creates a protective film on refractory components that support the flow of liquid metal and the erosion and wear that this operation entails.

BENEFITS

- Resistant to corrosion
- Protects against aluminium alloys and oxides
- Extends refractory lifetime
- Ability to use in graphite and metal parts
- Safe and easy to use
- Prevents dross formation
- Easy to apply: brush/spray

APPLICATIONS

- Launder systems
- Crucibles and ladles
- CFF and Degassing vessels
- Spouts, pins, and other casting consumables
- Dross press headers

RODABELL RBNC85
is available in white and blue format
